(54) BELT FOR PET

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a belt for a pet generating a voice by reacting to a sound, a light or smoke.

SOLUTION: When a man calls to a dog put in a collar having a voice generating device 6 'Now I go and will come back (in Japanese sense)', a microphone 8 detects the calling and outputs its electric signals. A control part analyzes frequency of the electric signals and identifies the voice 'Now I go and will come back' and outputs corresponding control signals. An IC memory part receives the control signals and reads out wave shape data of a corresponding voice 'good luck (in Japanese sense)' and outputs. A speaker driving part translates the digital signals to analog signals and amplifying, inputs to a speaker 18 and drives. As the result, a voice 'good luck' is generated from the speaker.
